**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Winner et al (US 6,273,204).

- In regard to claim 1, a device for controlling a speed of a motor vehicle in terms of one of a constant distance control in the case that at least one preceding vehicle is detected by a radar sensor and a constant speed control in the case that no preceding vehicle is detected by a radar sensor, the device comprising:
  - An arrangement for allowing a distance to a preceding vehicle to be set by a driver of the vehicle in the form of a time gap (Column 4, lines 15-16)
  - An arrangement for changing longitudinal dynamics of the speed control when the time gap changes (Column 4, lines 30-34).
  - An arrangement for increasing, given a decrease in the time gap, at least one of a maximum possible vehicle acceleration and a maximum possible vehicle deceleration implementable by a speed control system so that the vehicle is capable of at least one of accelerating and decelerating more quickly given the decrease in the time gap (Column 4, lines 46-59)

Art Unit: 3661

- An arrangement for first activating, given a decrease in the time gap, deceleration devices of the vehicle at a shorter distance from the preceding vehicle (Column 4, lines 15-45)
- In regard to claim 2, wherein a change in the time gap allows different driving programs to be selected. (Column 4, line 15 – Column 5, line 3)
- In regard to claim 5, a method for controlling a speed of a motor vehicle in terms of one of a constant distance control in the case that at least one preceding vehicle is detected by a radar sensor and a constant speed control in the case that no preceding vehicle is detected by a radar sensor, the method comprising:
  - Setting a distance to a preceding vehicle by a drive of the vehicle in the form of a time gap (Column 4, lines 15-16)
  - Changing longitudinal dynamics of the speed control when the time gap changes (Column 4, lines 30-34)
  - An arrangement for increasing, given a decrease in the time gap, at least one of a maximum possible vehicle acceleration and a maximum possible vehicle deceleration implementable by a speed control system so that the vehicle is capable of at least one of accelerating and decelerating more quickly given the decrease in the time gap (Column 4, lines 46-59)
  - An arrangement for first activating, given a decrease in the time gap, deceleration devices of the vehicle at a shorter distance from the preceding vehicle (Column 4, lines 15-45)
